You can easily create a background you like by customising the values in `spiral-buffer-*.js` file, where * stands for version name.

To accomplish that, you can play with various options given in those files on the 3rd line, e.g.:

```
var config = {
    bgcolor: "#e3d71f",
    color1: "#ffff00",
    color2: "#ffff8d",
    color3: "#ffd600",
    fade: 0.98,
    fill: true,
    groupSize: 10,
    lineWidth: 1,
    num: 99,
    opacity: 0.04,
    rotation: 0,
    shape: "triangle",
    size: 2.5,
    spacing: 2.5,
    speed: 0.35,
    stroke: false,
    wavelength: 0.56,
    zoom: 1
};
```

It's not recommended you change anything below this variable, unless you're 100% sure of what you're doing :-)
